

cerillo research platform

Cerillo's research platform is a comprehensive data collection and analytics system that enables scientists to study the growth curve of microorganisms like bacteria, yeast, and fungi in real-time providing unprecedented views into the microbiome.

benefits

- ▶ livestream your experiments with real-time data visualization.
- ▶ increase flexibility and reduce hands-on time with wireless controls.
- ▶ scale your experiments (connect up to 5 microplate readers!).
- ▶ analyze, collaborate and share your findings with premium labrador software.

our microplate readers are compact, portable, and versatile, allowing researchers to perform a wide range of assays and measurements even in small spaces like shared modular benchtops, incubators, and anaerobic chambers.

canopy, our premium wireless device, facilitates the seamless transmission of results from your plate readers to your monitor, enabling you to visualize growth data in real-time and adjust your experiments remotely.

our labrador companion software synchronizes and analyzes your microbiome data, providing you with in-depth insights.
